(54) Title: BOTTLE

(57) Abstract: Disclosed herein is a bottle capable of storing or mixing two or more different materials. The bottle results from the combination of a general bottle body with a mixing means including an openable additive container. The bottle body may be separated from the additive container so that different materials can be separately stored and then combined with each other upon use. Thus, the bottle can open new markets due to its greatly enhanced storage performance and economical advantages.
